SUMMARY

Enthusiastic Statistics and Data Science student at IPB University with a strong passion for analyzing data and uncovering valuable insights. Throughout my academic journey, I have gained in-depth knowledge of statistical concepts and proficiency in tools such as Python, R Studio, SQL, and Power BI. Complementing my studies, I gained hands-on experience as a Credit Risk Modelling Intern at KB Bank and as a Market Research Analyst Intern at Rapido Research, contributing to impactful projects in credit risk scoring, sales forecasting, and market research. I am a proactive and analytical individual with excellent communication skills, capable of collaborating effectively within diverse teams. Always eager to learn and ready to embrace new challenges to apply my expertise in the field of Statistics and Data Science.

EDUCATION

Statistics and Data Science @ IPB University

July 2022 – Present

Current GPA : 3.43

SKILLS & INTERESTS

Languages : Bahasa Indonesia (Native), English (Advanced)

Tools : Microsoft Excel, Python, R, SQL, SAS, SPSS, JASP, Minitab, Tableau, Looker Studio, Power BI

Soft Skills : Project Leadership, Advanced Problem Solving, Professional Adaptability, Priority Management

PROFESSIONAL EXPERIENCES

Credit Risk Modelling Intern | KB Bank

September 2025 – November 2025

- Credit Scoring Model
Performed data preparation and contributed to the development of a credit scoring model to support data-driven lending and credit risk assessment.

Market Research Analyst Intern | Rapido Research

September 2025 – November 2025

- Predictive Analytics & CRM
Developed sales forecasting models and performed customer segmentation based on transaction value and behavior to support strategic decision-making and inventory planning.
- Market Intelligence & Strategy
Conducted end-to-end quantitative research (Market Sizing, Market Share, Brand Health) and qualitative analysis (FGD Quality Control) across Agriculture, FMCG, and Retail sectors to formulate data-driven marketing strategies.
- Data Scraping & GIS
Utilized G-Business Extractor and Python for scraping spatial and product specification data, followed by data processing and mapping using QGIS.
- Consumer Insight Analysis
Analyzed Key Drivers, Triggers, and Barriers in consumer behavior to provide actionable recommendations for product development and customer satisfaction improvement.

ORGANIZATIONAL AND COMMITTEE EXPERIENCES

Staff of Sport and Art Management Division | Gamma Sigma Beta

December 2023 – December 2024

- Staff of Operational Division at Welcoming Ceremony of Statistics 2024.
- Staff of Sponsorship Division at Kompetisi Statistika Junior 2024.

Project Leader | GSB Olympics

March 2024 – June 2024

Head of Public Relations Division | Indonesia E-Sports Championship

March 2023 – September 2023

Staff of Event Organizer Division | IPB E-Sports

August 2022 – December 2023

- Staff of Public Relations Division at PUBG Mobile Campus Competition IPB 2022.
- Staff of Public Relations Division at PUBG Mobile Jawara Cup IPB 2022.

PROJECTS

Marketing Mix Modeling – Sales Forecast for Skincare Products

- Conducted end-to-end data processing including data cleaning, exploration, and model building to predict skincare product sales.

- Developed a robust forecasting model using the XGBoost algorithm, which demonstrated exceptional performance in tracking daily sales volatility.
- Successfully captured sudden demand spikes with high precision, providing actionable insights for inventory management.
- Analyzed the effect of advertisements on sales and found that ads had little impact.
- Presented the results through a clear Streamlit dashboard, making it easy to view the analysis and predictions.

E-Commerce Revenue & Risk Analysis (Python)

- Analyzed year-over-year sales quantity differences (2021 vs. 2022) across various categories using Python to detect market shifts.
- Identified critical Revenue Drivers and Product Dominance to maximize business growth opportunities.
- Addressed Inventory Risk Management by highlighting declining categories to prevent potential losses.
- Formulated strategies for Customer Retention and Sales Timing Optimization to enhance overall operational efficiency.

E-Commerce Sales Strategy Analysis (SQL)

- Conducted deep-dive analysis on large-scale datasets involving transaction, customer, and product information using PostgreSQL and MySQL.
- Evaluated sales performance across different channels (App Store, Play Store, Website) to identify high-growth platforms.
- Delivered actionable strategic recommendations regarding sales trends, inventory management, and channel optimization.
- Visualized monthly revenue trends and growth percentages to support data-driven decision-making for stakeholders.

Trend Campaign Dashboard

- Designed and developed an interactive Business Intelligence (BI) dashboard using Looker Studio to transform raw transaction data into visual insights.
- Established real-time tracking of critical KPIs including Total Revenue, Net Profit, and Year-over-Year (YoY) Sales Growth.
- Provided stakeholders with a holistic view of company performance, enabling detailed analysis by category, payment method, and transaction value.
- Visualized product profitability and category contributions to guide marketing campaign adjustments and budget allocation.

Human Development Index Clustering with Dimensionality Reduction

- Grouped Indonesian provinces based on the Human Development Index (HDI) and related indicators using the K-Means method, resulting in three main clusters.
- Applied Principal Component Analysis (PCA) to simplify the data, making the separation of groups clearer and easier to understand.
- Used t-SNE for further data reduction, leading to more distinct separation between groups and better understanding of data relationships.
- Successfully identified and visualized key characteristics influencing HDI across provinces, providing better recommendations for regional development policies.

Stock Portfolio Optimization

- Successfully created a stock portfolio with minimal risk using the SLSQP method, achieving a lower risk than other methods.
- Utilized Trust Region Constraint and SLSQP methods to determine optimal asset allocation weights.
- Recommended a dominant allocation in BBCA (40%) and PGAS (25%) stocks, generating a precise investment roadmap based on machine learning outcomes.
- Successfully balanced asset concentration and diversification to minimize risk while maintaining competitive returns.

NBA Teams Clustering Analysis

- Led a team in scraping and analyzing NBA Regular Season 2023/2024 data to categorize team performance.
- Implemented K-Means Clustering to group 30 NBA teams into 3 distinct performance clusters based on offensive and defensive metrics.
- Identified that the most successful teams (Cluster 1) excelled in offensive metrics like Field Goal Percentage and Free Throws while maintaining solid defense.
- Visualized the clusters using R Studio, providing strategic recommendations for teams aiming to qualify for the playoffs.

CERTIFICATES

• Data Analyst Intensive Bootcamp MySkill	November 2025
• Belajar Dasar AI Dicoding Indonesia	November 2025
• Huawei Certified ICT Associate - Artificial Intelligence Digital Talent Scholarship	November 2025
• Belajar Dasar Data Science Dicoding Indonesia	October 2025
• Belajar Dasar Dasar Structured Query Language (SQL) Dicoding Indonesia	October 2025
• Belajar Dasar Dasar Visualisasi Data Dicoding Indonesia	October 2025
• Belajar Dasar Pemrograman Prosedural dengan Python Dicoding Indonesia	October 2025
• Belajar Dasar Penggunaan Generative AI Dicoding Indonesia	October 2025
• Fundamental Data Science Digital Talent Scholarship	July 2025
